#### Talk Overview

A monoidal category is a category with an associative multiplication  $\otimes$  for objects and morphisms, and a unit object 1, such that the multiplication works well with composition.

## Monoidal Categories: Composition

## Monoidal Categories: Composition

$$f: a \to b \otimes c$$

$$g: b \otimes c \to a \otimes c$$

$$g$$

## Monoidal Categories: Composition

$$f: a \to b \otimes c$$

$$g: b \otimes c \to a \otimes c$$

$$\downarrow g$$

## Monoidal Categories: Identity

## Monoidal Categories: Tensor

$$f: a \to b \otimes c$$

$$h: x \to y$$

$$b \qquad c \qquad y$$

$$f \qquad h$$

## Monoidal Categories: Tensor

$$f: a \to b \otimes c$$

$$h: x \to y$$

$$b \qquad c \qquad y$$

$$f \qquad h$$

$$a \qquad x$$

## Monoidal Categories: Tensor

## Monoidal Categories: Unit

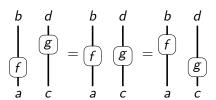

$$\textit{f}_1: \textit{a} \rightarrow \mathbb{1}$$

## Monoidal Categories: Unit

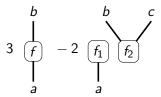

#### Interchange Law

## Isotopy

## $\mathbb{Z}$ -linear Monoidal Category

## Diagrammatic Soergel Bimodules

A  $\mathbb{Z}$ -linear monoidal category  $\mathcal{H}$  with:

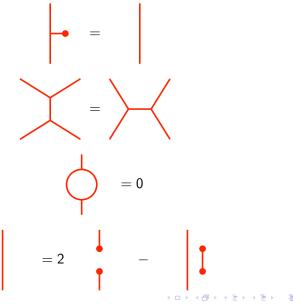

Generating object I.

Generating morphisms

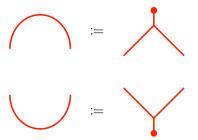

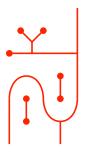

and local relations...

#### Relations

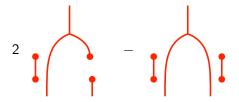

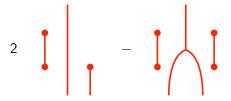

#### Relations

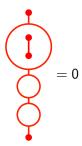

#### Soergel Bimodules

#### Theorem (Elias-Williamson, 2013)

The diagrammatic category  $Kar^{\oplus}(\mathcal{H})$  and the category of Soergel Bimodules  $\mathbb{S}$ Bim over  $S_2$  are equivalent as graded  $\mathbb{C}$ -linear monoidal categories.

#### Generalisations

- $\triangleright$  Coxeter groups e.g.  $S_n$ ,  $D_n$
- ▶ Other categories

## Further Applications

- ightharpoonup Category  $\mathcal O$
- ► Characteristic *p*
